

## AMENDMENTS

### In the Claims

The following is a marked-up version of the claims with the language that is underlined (“    ”) being added and the language that contains strikethrough (“~~—~~”) being deleted:

1. (Currently Amended) A document processing system for providing information corresponding to a scanned document, said document processing system comprising:

a scan review system configured for receiving scan information corresponding to a scanned document, said scan review system being configured to enable selection of a registration characteristic of a page of a document to be scanned and review the document to be scanned relative to the selected registration characteristic such that, in response to identifying a page of the document as not possessing the selected registration characteristic, said scan review system designates the page for review, wherein the registration characteristic is at least one of: top line, top margin, bottom line, bottom margin, left margin and right margin.

2. (Original) The document processing system of claim 1, further comprising:

a scanner communicatively coupled to said scan review system, said scanner being configured to receive the document to be scanned and convert printed information of each page of the document into scan information, the scan information being provided in an electronic format to said scan review system.

3. (Original) The document processing system of claim 1, wherein said scan review system is configured to provide a graphical user interface, said graphical user interface being configured to enable selection of the registration characteristic.
4. (Original) The document processing system of claim 1, wherein said scan review system comprises means for enabling selection of the registration characteristic.
5. (Canceled).
6. (Currently Amended) The document processing system of claim ~~1~~3, wherein said scan review system is configured to determine a page number of each page of a document to be scanned and to designate scan information corresponding to pages of the document that are not scanned in page order.
7. (Currently Amended) The document processing system of claim ~~1~~3, wherein said scan review system comprises:
  - means for determining a page number of each page of a document to be scanned; and
  - means for designating scan information corresponding to pages of the document that are not scanned in page order.
8. (Currently Amended) The document processing system of claim ~~1~~3, wherein said scan review system is configured to generate two files associated with each page of a document to be scanned, a first of said files containing page content information and a second of the files containing page number information, said scan review system being further

configured to utilize the page number information to arrange the page content information in page number order.

9. (Currently Amended) The document processing system of claim 4-3, wherein said scan review system is embodied on a computer readable medium.

10. (Original) The document processing system of claim 3, wherein said graphical user interface provides a page viewing window configured to display therein scan information corresponding to a page of the document to be scanned.

11. (Original) The document processing system of claim 9, wherein said scan review system comprises logic configured to designate pages of the document that were not scanned in page order.

12. (Original) The document processing system of claim 10, wherein said graphical user interface is configured to provide an operator with information indicating the pages of the document that were not scanned in page order.

13. (Original) The document processing system of claim 10, wherein said graphical user interface provides a page number field, said page number field being moveable by an operator about said page viewing window such that a location corresponding to a page number of a page to be scanned may be designated, and wherein said scan review system is configured to process scan information located in a vicinity of said page number field to determine the page number of the page.

14. (Currently Amended) A method for providing information corresponding to a scanned document comprising ~~the steps of~~:

enabling selection of a registration characteristic of a page of the document, wherein the registration characteristic is at least one of: top line, top margin, bottom line, bottom margin, left margin and right margin;

reviewing pages of the document relative to the selected registration characteristic;  
and

enabling receipt of scan information corresponding to the pages of the document.

15. (Currently Amended) The method of claim 14, wherein ~~the step of~~ reviewing comprises designating pages not properly exhibiting the selected registration characteristic.

16. (Currently Amended) The method of claim 14, further comprising ~~the steps of~~:

determining whether a current page of the document to be scanned corresponds to an expected page number; and

if the current page number does not correspond to the expected page number,  
designating the current page for review.

17. (Currently Amended) The method of claim 14, further comprising ~~the step of~~ preparing an e-file corresponding to the document to be scanned.

18. (Canceled)

19. (Currently Amended) The method of claim 17, wherein the step of preparing an e-file comprises ~~the steps of~~:

generating, for each page scanned, a first file containing page content information;  
generating, for each page scanned, a second file containing page number information,  
each second file being associated with a respective first file; and  
utilizing the second files so as to arrange the page content information of the first files  
in page number order.

20. (Currently Amended) The method of claim 19, further comprising ~~the steps of~~:

identifying pages missing from the e-file;  
scanning the missing pages; and  
providing page content information associated with the missing pages to the e-file  
such that the page content information is arranged in page number order.

21. (New) The document processing system of claim 3, wherein the graphical user interface is configured to enable an operator to position the registration characteristic selected such that the scan review system compares a position of a document for scanning relative to the position of the registration characteristic selected.

22. (New) The method of claim 14, further comprising:

enabling an operator to position the registration characteristic selected such that a position of a document for scanning can be compared to the position of the registration characteristic selected.
